BMR 2005+ Mustang Handling Packages

Thonotosassa, FL - To say the new 2005+ S197 Mustang is a hit would be an understatement. The aftermarket is booming with power adders, visual mods, and various performance products. It's gotten to the point where choosing what you want can become confusing due to the sheer amount of options available. When it comes to suspension and chassis products, why pick and choose components from various manufacturers. BMR has the most extensive line of products for the new Mustang and we have developed multiple Packages with products designed to work with each other, matched to your level of driving.

BMR Level 1 and Level 2 Handling Packages are designed to produce the most stable, predictable handling available without compromising ride quality. Level 1 includes our popular Lowering Package (Springs, Strut Mounts, Adjustable Panhard Rod, and Control Arm Relocation Brackets), Tokico D-Spec adjustable gas struts/shocks, and our front and rear HD sway bars.

The Level 2 Package goes a step further by adding chassis reinforcement. It combines the Level 1 components with the following chassis products:

- Boxed Multi-point Subframe Connectors
- Driveshaft Tunnel Support
- A-arm Support
- Upper Panhard Rod Support
- Strut Tower Brace

Level 1 Package # HPP001

Level 2 Package # HPP002
