Xtreme Anti-roll Bar for 1978-1987 GM A-Body *BOLT-ON*

Thonotosassa, FL - If you like to drag race your G-body, this is the anti-roll bar for you. BMR engineered this bar around the original contours so it clears all OE and OE-style rear ends and aftermarket exhaust systems and installs with no cutting or welding.

- Massive 1-3/8" bar diameter
- Easy bolt-on design with the option to be welded
- Heavy duty 1/2" high-angularity rod ends

The factory optional rear sway bar works pretty good for handling but falls short when it comes to drag racing. There are two main reasons for this. One, the OE bar diameters are nowhere near large enough to control torque loading on a launch. And second, the OE-type bar only attaches to the control arms with no frame attachment points allowing too much body separation and no way to control it. By attaching the end-links to the frame, body separation is eliminated and transferred to forward momentum. This combined with the large diameter bar's ability to better control torque loading creates more consistent and predictable launches and better 60 ft/times. Provided with all necessary Grade 8 mounting hardware.

Part# XSB008 – 3" axle tubes

Part# XSB009 – 2.75" axle tubes

Part# XSB010 – 3.25" axle tubes
